Configure start up wizard

Select the screen resolution from the drop-down menu based on your TV/monitor's resolution.

Check this box if you wish to see this wizard again after you reboot your system.

We strongly recommend that you change the default Admin password (123456) for better security protection.

Select the applicable time zone, date/time format, and time.

We recommend checking "Enable DHCP" even if your DVR is not connected to the Internet; this will automatically get the DVR's IP address.

The wizard will show additional network information, click 'next' to proceed.

To initialize the hard drive click the 'init' box otherwise the DVR will not record.

If you wish to add an IP camera click 'search' otherwise, click 'next' to proceed.

Choose continuous or motion detection recording from the listed options. Check the 'start recording' box to initialize recording. Click 'OK' to finish the wizard.

What is in the box?

- Network Video Recorder
- High Definition IP Cameras
- Pre-made Cat5e Cables
- Remote Control
- Mouse
- Power Cord
- USB Cable
- Quick Start Guide
- Warranty Card
- Security Stickers

Troubleshooting

Problem: No signal/No motion detected.

Solution: Make sure the HDMI cable is correctly connected to both the DVR and TV/monitor.

Problem: Network connection issues.

Solution: Make sure the IP address assigned is within the acceptable range.

Problem: Unable to access DVR via IP address.

Solution: Check if the firewall on your computer is set to allow the DVR.

Remote Viewing

View footage on your mobile devices with our app. You can either scan the provided QR code below or search "LaView Net" in the app store. Then scan the QR code located on the NVR for device ID/Port Info.

QUICK START GUIDE

1. Connect your cameras
   - Connect the Cat5e cable into the camera
   - Connect the other end of the Cat5e cable into the NVR PoE port. (Repeat for all cameras)

2. Connect to your monitor/TV
   - Connect your NVR and TV/monitor with a HDMI or VGA cable (Not included)
   - Note: Your monitor/TV must support the output resolution of the NVR or you may get a black screen or a possible error message. You cannot use a laptop as a display.

3. Connect the mouse and power
   - Connect the mouse to the USB port
   - Connect the NVR power cable to the DVR

4. Connect to your network
   - Connect the LAN port on the NVR to the LAN port on your router via an Ethernet cable for remote viewing on your mobile phone, tablets, PC and Mac
   - You can also add existing IP cameras to your NVR from your network
   - Note: The NVR will still work as a standalone video recorder if you do not have internet connection and skip this step.

5. Configure the start up wizard
   - The connection is now completed. Turn off the power switch and follow the start-up wizard on your screen to configure the NVR. (Next Page)
