QUICK START GUIDE

We recommend testing all the cameras and cables prior to installation.

1. Connect your cameras
   - Connect the BNC plug and power plug of the siamese cable into the camera
   - Connect the opposite BNC plug into the DVR VIDEO IN port and the power plug into the camera power splitter (Repeat for all cameras)
   - Connect the power splitter into camera power supply

2. Connect to your monitor/TV
   - Connect your DVR and TV/monitor with a HDMI or VGA cable (Not included)
   - Note: Your monitor/TV must support the output resolution of the DVR or you may get a black screen on a possible error message. You cannot use a laptop as a display.

3. Connect the mouse and power
   - Connect the mouse to the USB port
   - Connect the 12V DVR power adapter to the DVR

4. Connect to your network (Optional)
   - Connect the LAN port on the DVR to the LAN port on your router via an Ethernet cable for remote viewing on your mobile phone, tablets, PC and Mac
   - Note: The DVR will still work as a standalone video recorder if you do not have internet connection and skip this step.

5. Configure the start up wizard
   - The connection is now completed. Turn on the power switch and follow the start-up wizard on your screen to configure the DVR. (next page)
